PROFESSIONAL SUMMARY

Engineering Team Lead with **8 years** building production web platforms in **React**, **Angular** and **TypeScript** for the solar energy & EV industry. Lead a cross-functional team of **7+ engineers** (frontend, backend, QA), owning delivery, architecture, code reviews and hiring. Owned **six products across their full lifecycle** and shipped **AI features** into live customer and installer workflows. Delivered a **45.7%** speed-index gain, cut pentest vulnerabilities by **70%**, and shaped serverless services behind a campaign that issued **20,000 coupons at 90% redemption**.

EXPERIENCE

Electrum (formerly Pick My Solar India Pvt Ltd) | Nov 2019 – Present

Hyderabad, India

Team Lead | Sep 2024 – Present

- **Lead a cross-functional team of 7+** (frontend, backend, QA) in Agile/Scrum: sprint planning, effort estimation, technical feasibility, code-review standards and CI/CD releases across Dev, UAT and Production.
- **Led the team that carried six products forward** after their first release, keeping their architecture and roadmap: Control Center, Hubble, Installer Dashboard, white-label customer app, Electrum.co and Solar.com, and the Partner Reporting Portal.
- **R&D lead for new product problems**: trusted by leadership to scope and prototype solutions with no existing playbook.
- **Shipped two AI features** with Claude (Haiku) via the Anthropic API, owning UI, prompts and integration: photo-quality scoring on customer uploads and serial-number auto-fill from charger photos, confirmed by the installer. Customers fix photos at upload; Ops no longer coordinates offline.
- **Owned the Partner Reporting Portal end to end across 3 repositories** (React, TypeScript), giving **20+ partners** role-scoped, self-serve access to embedded **Amazon QuickSight** and **Looker Studio** dashboards. Wrote the PRD and delivered it task by task with AI-assisted development (Claude with Playwright, Chrome DevTools and Figma MCPs) and **Vitest** unit tests.
- **Architected a lead-distribution engine** with the backend team, replacing round-robin assignment by ranking installers on real-time pricing, NPS/CSAT and new-installer prioritization, serving thousands of installers across the US.
- **Co-designed a serverless, event-driven coupon microservice** on AWS Lambda: its first campaign issued **20,000 coupons** at a **90% redemption rate** within 3 months.
- **Co-designed a secure PII file-processing pipeline** (CRON, SFTP, AWS Lambda, encryption) for partner EV-sales data, built as reusable infrastructure for future partners.

Senior Frontend Developer | Apr 2021 – Aug 2024

- **Architected and rebuilt the legacy PHP Control Center** admin dashboard as a React application (atomic design, **Redux**, Context API, Material UI, Jest), improving **performance** (speed index) by **45.7%** through code splitting, lazy loading and memoization; owned the UI/UX design system.
- **Designed and built the first release of Hubble** (React, TypeScript, Redux), the lead and operations platform: lead management, bids, installer reassignment, calculation configurations and photo review. Ops now tracks every lead on its own, with far less back-and-forth with engineering.

- **Designed and built the Installer Dashboard** (Angular, TypeScript, RxJS), a self-service portal with organization-based RBAC where installers onboard, manage sub-users, track leads, set equipment pricing and send quotes across solar, battery, heat pump, EV charger and backup power products.
- **Built the white-label customer app** (Angular, RxJS), the main customer journey, configurable per partner by text, features and theme, so **20+ partners** were onboarded through configuration only; added A/B split testing and configurable HTML-to-PDF quotes and invoices.
- **Designed and built a permission-based RBAC system**: admins compose custom roles from granular permissions, and every route, section, field and action is guarded on the frontend. It became the access foundation for the other platforms.
- **Led frontend security hardening** with JWT authorization and Google SSO, **reducing pentest vulnerabilities by 70%**, and enforced secure-coding practices through code reviews.
- **Built the analytics and monitoring layer** (Google Analytics, Segment, Mouseflow, Datadog, custom events, cookie consent) to map user flows and find conversion drop-offs.
- **Interviewed frontend candidates**, onboarded new engineers and mentored them on the codebase, standards and code reviews.

Frontend Developer | Nov 2019 – Mar 2021

- **Built the Electrum.co and Solar.com consumer websites** (Angular) on a multi-site architecture, showing deals by user persona (address, utility, product type, installer) and by location and property type; Gulp-based CSS/JS optimization and cross-browser support.
- **Drove ADA/WCAG 2.1 AA accessibility compliance** across all applications, including complete keyboard navigation, working with Product and Design.

Project Engineer | Jul 2018 – Jun 2019

Wipro Technologies

- Built Angular 2+ web portals for enterprise clients to manage project-team data and workflows.
- Reviewed team-built features for quality, correctness and adherence to specifications.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, HTML5, CSS3, React, Redux, Redux Thunk, Context API, React Router, Angular 17+ (Signals, Standalone Components), RxJS, Angular Material

Styling: Tailwind CSS, Material UI, Bootstrap

Testing & Quality: Jest, Vitest, Playwright, Web Accessibility (WCAG 2.1 AA), Lighthouse, Chrome DevTools

Auth & Security: JWT, Google SSO, RBAC (permission-based rendering)

AI & Tooling: Anthropic API (Claude Haiku, vision), prompt engineering, human-in-the-loop AI UX, AI-assisted development (Claude), MCP (Playwright, Figma, Chrome DevTools), Figma, Jira

Engineering Practices: Git, GitHub, REST APIs, CI/CD, Agile/Scrum, code reviews, release management

Backend & Cloud (Architecture & Integration): Node.js, Express.js, AWS Lambda, Serverless Architecture, MySQL

Observability & BI: Google Analytics, Segment, Datadog, Mouseflow, Amazon QuickSight, Looker Studio

EDUCATION

Bachelor of Technology, Computer Science | Jul 2014 – May 2018

Govt. Women Engineering College, Ajmer
